A new concept starting from 2017 Focus on animal production

Presentation of livestock, machinery and technology for animal production at the Brno Exhibition Centre will get a completely new space in 2017. The new complex of events led by the **ANIMAL TECH trade fair and the National Show of Livestock** focuses on animal production and its professional community – breeders, farmers, veterinarians and zootechnicians.

Concurrently are taking place the **National Gamekeeping Show and NATUR EXPO BRNO** – Nature and Landscape Protection Fair.

This concept gives a professional streak to the presentations of livestock and related technologies, and it will be more efficient for manufacturers and importers of breeding technologies, animal health and reproduction technology, suppliers of feed and medical products for livestock, as well as producers and importers of agricultural machinery.

Newly held in May: 11 to 14 May 2017
